## Sewer District Offers Tour of Eco-Friendly Plant for Local Students

### *Great Neck Water Pollution Control District Welcomes New York Institute of Technology*

The Great Neck Water Pollution Control District (GNWPCD) recently invited New York Institute of Technology students to tour the District's facility at 236 East Shore Road, Great Neck, N.Y., one of the most environmentally conscious wastewater treatment plants in the country.

Students viewed the wastewater treatment plant as a model for green infrastructure and sustainability for the future. During the tour, GNWPCD Superintendent Christopher Murphy described ongoing eco-friendly projects, including the ultraviolet disinfection system, anaerobic digesters, micro turbine systems and water conservation initiatives.
