### **Great Neck Water Pollution Control District Teaches Local Students about Wastewater Treatment**

Great Neck Water Pollution Control District's (GNWPCD) Superintendent Christopher Murphy recently hosted students from Floral Park Memorial High School to tour the District's wastewater treatment facility and learn about wastewater management. Students viewed the wastewater treatment plant as a model for green infrastructure and sustainability for the future.

The tour and presentation are part of a GNWPCD educational initiative to teach local students about the importance of wastewater treatment for community health and the environment. The students received a unique education about the history and current reality of the wastewater industry – all coinciding with their current classroom curriculum.
